

How to: Programmatically Remove All Comments from Documents

Use the `DeleteAllComments` method to remove all comments from a Microsoft Office Word document.

Applies to: The information in this topic applies to document-level projects and VSTO add-in projects for Word. For more information, see [Features Available by Office Application and Project Type](#).

To remove all comments from a document that is part of a document-level customization

1. Call the [DeleteAllComments](#) method of the `ThisDocument` class in your project. To use this code example, run it from the `ThisDocument` class.

C#

```
this.DeleteAllComments();
```

To remove all comments from a document by using an VSTO Add-in

1. Call the [M:Microsoft.Office.Interop.Word._Document.DeleteAllComments](#) method of the [Microsoft.Office.Interop.Word.Document](#) from which you want to remove comments.

The following code example removes all comments from the active document. To use this code example, run it from the `ThisAddIn` class in your project.

C#

```
this.Application.ActiveDocument.DeleteAllComments();
```
